

```

1 from datetime import datetime
2
3 problem_size = 1000000
4
5 print('Problem Size      Seconds')
6
7 for i in range(4):
8
9     start = datetime.now()
10
11
12     work = 1
13     for x in range(problem_size):
14         work += 5
15         work -= 5
16
17     end = datetime.now()
18     time_delta = end - start
19     seconds = time_delta.total_seconds()
20     print(f"{problem_size}      {seconds}")
21     problem_size = problem_size * 3

```

Problem Size	Seconds
1000000	0.128758
3000000	0.268295
9000000	0.80186
27000000	2.425171
